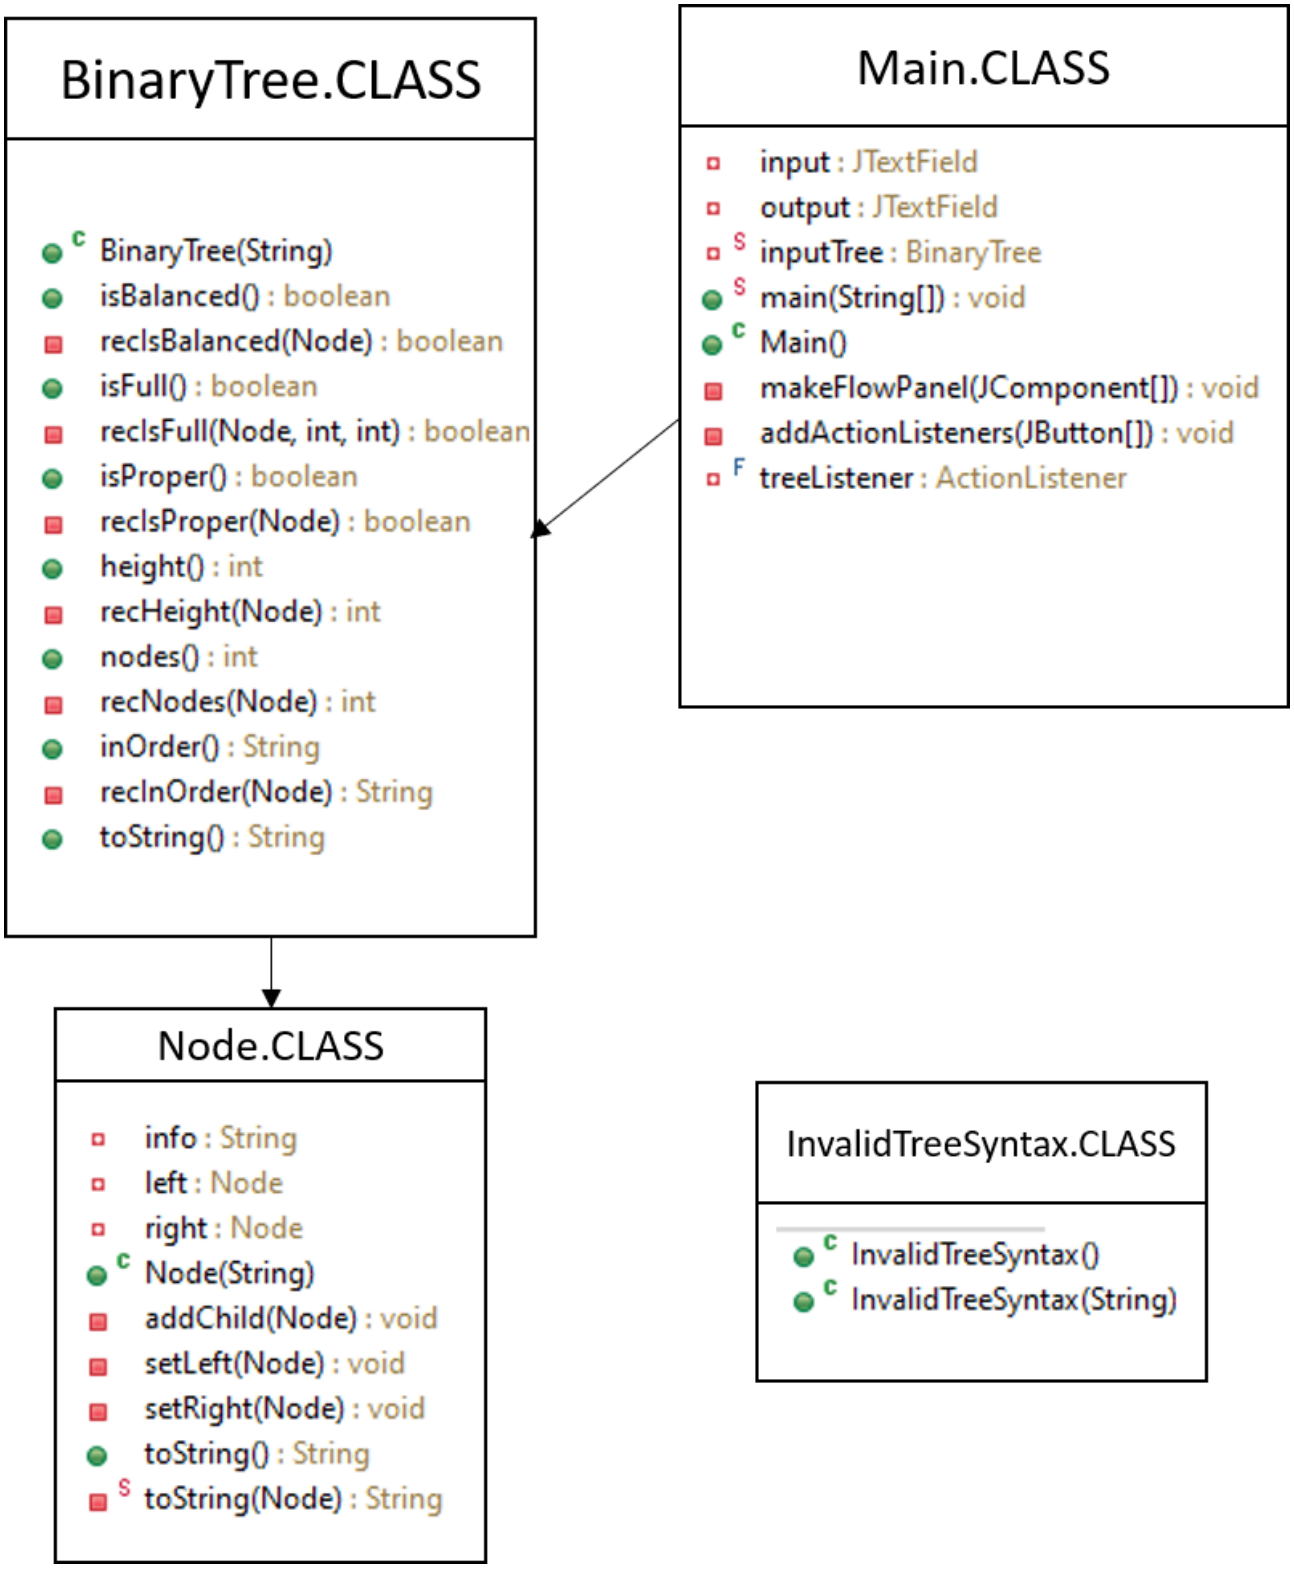
Project 3

UML Class Diagram



#	Input	Expected Output	Actual Output	Pass?
1	 (A(G(j)(1))(z(5)))	Make Tree: (A(G(j)(1))(z(5))) Balanced?: true Full?: false Proper?: false Height: 2 Nodes: 6 In Order: (((j)G(1))A((5)z))	Make Tree: (A(G(j)(1))(z(5))) Balanced?: true Full?: false Proper?: false Height: 2 Nodes: 6 In Order: (((j)G(1))A((5)z))	YES
2	 (Z(9(z))(8(y)(z)))	Make Tree: (Z(9(z))(8(y)(z))) Balanced?: true Full?: false Proper?: false Height: 2 Nodes: 6 In Order: (((z)9)Z((y)8(z)))	Make Tree: (Z(9(z))(8(y)(z))) Balanced?: true Full?: false Proper?: false Height: 2 Nodes: 6 In Order: (((z)9)Z((y)8(z)))	YES
3	 (Z(1(a)(b(3)(4)))(2(c)(d)))	Make Tree: (Z(1(a)(b(3)(4)))(2(c)(d))) Balanced?: true Full?: false Proper?: true Height: 3 Nodes: 9 In Order: (((a)1((3)b(4)))Z((c)2(d)))	Make Tree: (Z(1(a)(b(3)(4)))(2(c)(d))) Balanced?: true Full?: false Proper?: true Height: 3 Nodes: 9 In Order: (((a)1((3)b(4)))Z((c)2(d)))	YES

I've worked extensively with the concepts of trees, mainly decision trees, so this project made sense from the beginning. The pseudocode was fairly easy to organize, but the source code took quite a bit of research, trial, and error. Something I learned; using the Eclipse IDE allows you to build a ULM in the outline section of the IDE. I took screenshots and inserted them in the boxes in the ULM diagram. I'm hoping this helps me understand the ULM concepts better.
